Note:

1. TV/Amp SWITCH

Switching of the signal from ANT IN or Modulator to RF out of VHF RF Modulator.

2. A/V REC SOURCE SWITCH

Switching of Audio signal only for recording from PHONO, TUNER, or CD (AUX) to VTR1 or VTR2, and from VIDEO TUNER, VIDEO DISC, VTR1 or VTR2 to Tape.

3. Auto REC SELECTOR

The signal line of TV-TUNER IN will be automatically connected to REC OUT terminal internally regardless of REC SELECTOR position when the FUNCTION SWITCH is turned off, consequently, the timer recording from TV-TUNER can be executed only by setting the timer on VTR and TV-TUNER.

ATTENTION

1. When placing an order for parts, be sure to list the parts no., model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Parts List may be partially changed, please use this parts list for all future reference.

HOW TO USE THIS PARTS LIST

1. This Parts List shows the parts that are considered necessary for repairs. Other parts, such as resistors and capacitors, are shown in the "Common List for Service Parts". Select and order such parts from the "Common List for Service Parts".
2. The Recommended Spare Parts shows those parts in the Parts List which are considered particularly important for service.
3. Parts not shown in the Parts List and "Common List for Service Parts" will not be supplied in principle.

NOTICE DE SECURITE

AVERTISSEMENT:

POUR ÊTRE ASSURÉ D'UNE SECURITE OPTIMALE À TOUT MOMENT, REMPLACER LES COMPOSANTS CRITIQUES UNIQUEMENT PAR LES PIÈCES RECOMMANDÉES PAR LE FABRICANT DE L'APPAREIL. CES PIÈCES SONT IDENTIFIÉES PAR UNE ZONE D'OMBRE ET PAR LE SYMBOLE (△) SUR LE SCHEMA DE MONTAGE.

Certain H V failures can increase X-ray radiation. Monitors should not be operated with H V levels exceeding the specified rating for their chassis type. The maximum operating H V specified for the chassis used in these monitor is 7.5 ± 0.5kV at Zero beam current with an input voltage of 120VAC.

Higher voltage may also increase possibility of failure in H V supply.

To determine the presence of high voltage, use an accurate, high impedance, H V meter connected between second anode lead and the C. R. T. tag grounding device. When servicing the High Voltage System, remove static charge from it by connecting a 10k ohm resistor in series with an insulated wire (such as a test probe) between picture tube tag and 2nd anode lead (AC line cord disconnected from AC supply). After servicing fix the anode cap onto picture tube and check and ensure the metal protector is surely adhered.

The picture tube used in this monitor employs integral implosion protection.
Replace with tube of the same type number for continued safety.

SAFETY INSTRUCTIONS

SAFETY CHECK AFTER SERVICING

Confirm the specified insulation resistance between power cord plug prongs and externally exposed parts of the set is greater than 10 Mohms, but for equipment with external antenna terminals (tuner, receiver, etc.) and is intended for \square or \square , specified insulation resistance should be more than 2.2 Mohms (ground terminals, microphone jacks, headphone jacks, line-in out jacks etc.).

PRECAUTIONS DURING SERVICING

1. Parts identified by the Δ symbol parts are critical for safety.
Replace only with parts number specified.
2. In addition to safety, other parts and assemblies are specified for conformance with such regulations as those applying to spurious radiation. These must also be replaced only with specified replacements.
Examples: RF converters, tuner units, antenna selector switches, RF cables, noise blocking capacitors, noise blocking filters, etc.
3. Use specified internal wiring. Note especially:
 - 1) Wires covered with PVC tubing
 - 2) Double insulated wires
 - 3) High voltage leads
4. Use specified insulating materials for hazardous live parts. Note especially:
 - 1) Insulation Tape
 - 2) PVC tubing
 - 3) Spacers (Insulating Barriers)
 - 4) Insulation sheets for transistors
 - 5) Plastic screws for fixing microswitch (especially in turntable)
5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.), wrap ends of wires securely about the terminals before soldering.

6. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.).
7. Check that replaced wires do not contact sharp edged or pointed parts.
8. Also check areas surrounding repaired locations.
9. Use care that foreign objects (screws, solder droplets, etc.) do not remain inside the set.

X-RADIATION PRECAUTION

The primary source of X-RADIATION in monitor is the picture tube. The picture tube is specially constructed to limit X-RADIATION emissions. For continued X-RADIATION protection, the replacement tube must be the same type as the original. Excessive high voltage may produce potentially hazardous X-RADIATION. To avoid such hazards, the high voltage must be maintained within specified limit.

VOLTAGE CONVERSION

Models for Japan, Canada, USA and Germany are not equipped with this facility. Each machine is preset at the factory according to its destination. However, if your machine is incorrectly set, follow the procedure below.

- 1) Confirm that the POWER Switch on the rear panel is set to OFF.
- 2) Confirm that the POWER Cord is disconnected.
- 3) Move the AC INPUT selector with a screwdriver so that the marker is above the voltage for your area.

CYCLE CONVERSION

Cycle conversion is not necessary.

V. DESCRIPTION OF THE UNIT

5-1 FEATURES

1. A full range of input capability, handling up to 4 audio and 4 video components.
2. One-touch selection for combining any video and Hi-Fi audio components.
3. The AV-U8 makes it possible to record and dub between any components while normal TV viewing goes on uninterrupted.
4. The 4 inch monitor and headphone capability, allows you to watch and listen to the program being recorded independently of the main monitor-especially usefull for editing.

5. The DNR (Dynamic Noise Reduction) feature, reduces tape hiss in any source by 10 dB, making high quality sound reproduction simple.
6. The AV-U8's controls, allow you to adjust the monitor picture as you like.
7. Line and RF terminals make it possible to connect TV's that have only antenna inputs, line inputs or both.
8. The built-in signal divider feature allows the signal from your TV antenna to be sent to both the television and video tape recorder.
9. The pre-out terminals allow you to connect high output amplifiers.

5-2 SYSTEM EXAMPLES AND MERITS

System Examples	Merits
	<ol style="list-style-type: none"> 1. Hi-Fi stereo reproduction with video tape recorders. 2. IMS operation with the built-in monitor. 3. The built-in monitor allows monitoring of the program being received (recorded) by the video tape recorder. 4. When the TV set is being used independently, the built-in monitor can be used as a playback monitor for the video tape recorder.
	<p>1 ~ 4 same as above</p> <ol style="list-style-type: none"> 5. One-touch selection of the video images from two video tape recorders. 6. Dubbing of VTR-1 → VTR-2. 7. Dubbing of VTR-2 → VTR-1. One touch selectable. 7. The video frames being dubbed can be monitored with the built-in monitor.

ATTENTION

1. When placing an order for parts, be sure to list the parts no., model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Parts List may be partially changed, please use this parts list for all future reference.

HOW TO USE THIS PARTS LIST

1. This Parts List shows the parts that are considered necessary for repairs. Other parts, such as resistors and capacitors, are shown in the "Common List for Service Parts". Select and order such parts from the "Common List for Service Parts".
2. The Recommended Spare Parts shows those parts in the Parts List which are considered particularly important for service.
3. Parts not shown in the Parts List and "Common List for Service Parts" will not be supplied in principle.

Certain H V failures can increase X-ray radiation. Monitors should not be operated with H V levels exceeding the specified rating for their chassis type. The maximum operating H V specified for the chassis used in these monitor is 7.5 ±0.5kV at Zero beam current with an input voltage of 120VAC.

Higher voltage may also increase possibility of failure in H V supply.

To determine the presence of high voltage, use an accurate, high impedance, H V meter connected between second anode lead and the C. R. T. tag grounding device. When servicing the High Voltage System, remove static charge from it by connecting a 10k ohm resistor in series with an insulated wire (such as a test probe) between picture tube tag and 2nd anode lead (AC line cord disconnected from AC supply). After servicing fix the anode cap onto picture tube and check and ensure the metal protector is surely adhered.

The picture tube used in this monitor employs integral implosion protection. Replace with tube of the same type number for continued safety.
